Why E-SG.cloud?

Whether you are forced to report on ESG due to EU regulations or you want to do it voluntarily, we have a solution that makes it all **much easier**.

With E-SG.cloud you can:

- Find out what is relevant for you to report on.
- Access the latest data and requirements.
- Gather all your documentation in one place and easily collaborate across teams.
- Get help from our AI assistant.
- Get help integrating E-SG.cloud with your existing systems.
- Freely choose the layout for the format of the final report.

Stay ahead of requirements and get a handle on ESG reporting with accurate, audit-ready data!

What is VSME?

VSME is a standardised template designed to facilitate ESG (Environmental, Social, Governance) reporting by offering companies a structured approach to sustainability. The template enables reporting on predefined areas while adapting to the unique needs of each company.

There are three flexible modules:

- **The basic VSME module:** A basic approach for companies that want to get started with ESG reporting.
- **The comprehensive VSME module:** In-depth reporting that covers the entire company's ESG performance.
- **The company-specific VSME module:** Focus on ESG areas that are most relevant to the company's stakeholders.

The 11 disclosures in the Basic VSME Module

The basic VSME module includes **11 carefully selected disclosures** to ensure that the reporting fulfils requirements and expectations. Some are mandatory, some are only mandatory if they are relevant:

B1 - Basis for preparation

B2 - Practices, policies and future initiatives for transitioning towards a more sustainable economy

B3 - Energy and greenhouse gas emissions

B4 - Pollution of air, water and soil

B5 - Biodiversity

B6 - Water

B7 - Resource use, circular economy and waste management

B8 - Workforce – General characteristics

B9 - Workforce – Health and safety

B10 - Workforce – Remuneration, collective bargaining and training

B11 - Convictions and fines for corruption and bribery

The 9 disclosures in the Comprehensive VSME Module

The comprehensive VSME module includes **9 carefully selected points** to ensure that reporting fulfils extended requirements and expectations. These points provide a foundation for ESG reporting and can be supplemented as needed:

C1 - Strategy: Business Model and Sustainability – Related Initiatives

C2 - Description of practices, policies and future initiatives for transitioning towards a more sustainable economy

C3 - GHG reduction targets and climate transition

C4 - Climate risks

C5 - Additional (general) workforce characteristics

C6 - Additional own workforce information - Human rights policies and processes

C7 - Severe negative human rights incidents

C8 - Revenues from certain sectors and exclusion from EU reference benchmarks

C9 - Gender diversity ratio in the governance body

How to create your VSME report

Step 1: Choose your standard

As an optional but recommended feature, E-SG.cloud offers a **dual materiality analysis** as part of the VSME template. The analysis helps companies identify which ESG factors are important to both the company's financial performance and the outside world. This is especially relevant for companies on a growth journey that expect their customers to demand Double Materiality Analysis (DMA) in preparation for the Corporate Sustainability Reporting Directive (CSRD).

VSME with an optional Double Materiality Analysis (DMA) serves as a **strategic tool** to prepare companies for the upcoming requirements of the CSRD. By using the two templates together, companies can easily upgrade their reporting practices to meet the latest regulatory requirements.

Step 5: Download your report as either an Excel or ZIP file

VSME as a strategic template

What sets VSME apart from other ESG reporting tools is its holistic approach. VSME is not just a checklist of standard items, it is a strategic methodology that helps companies analyse and **understand their entire business** in a sustainability context.

The template recognises that materiality varies from company to company. This allows companies to identify and work with the sustainability aspects that are most **relevant** to them, not just those that are generally recognised.

VSME gives companies a powerful tool that allows them to see their entire business through a sustainability lens. It's about creating **real value**, not just meeting reporting requirements. VSME helps companies develop a sustainability strategy that is customised to their specific needs and growth ambitions.

What do our customers say about E-SG.cloud?

E-SG.cloud explained everything in clear, simple terms and their user-friendly platform made the whole process easy and efficient.

gp>kollund

The on-boarding has worked really well with ongoing support and a structured series of meetings. The first meeting provided a thorough review of what it means to work with ESG, a good presentation and ongoing dialogues/questions along the way.
